The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 3-11 are rejected under 35 U.S.C. 103(a) as obvious over 7001581.

The reference teaches, especially in col. 5-11 and ex. 1, making nanotubes from nanometals (compare to present specification) under supercritical conditions. The hydrocarbon is exposed to these conditions during synthesis, even though an additional material is referred-to. Cooling is axiomatic in the recovery of the product. While the reference does not teach the compounds enumerated, the teaching of acid salts and enumeration of formate and oxalate renders the claims obvious, since these are organic acid anions (like actetate).15 Mpa is about 1.5 atmospheres. As to claims 4, 9 and 10, the above does not explicitly teach the relative amounts and cooling rates, however these are routine variations to one of ordinary skill to optimize reaction time and throughput for large-scale processing.

Claim 7 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no exemplification of a pressure of 1 atm. No carbon materials are identified which can meet this parameter. As claim 1 requires critical conditions, this pressure appears impossible. Clarification is requested.

Applicant's arguments filed 4/8/10 have been fully considered but they are not persuasive. The specification lacks recitation of 1 atm, and this does not appear plausible. Reference to page and line is requested. Applicant should point out a material in the specification which has a critical point of 1 atm. or a passage with this verbiage. This is not an enablement rejection; it appears that such a material does not exist which corresponds to the

Art Unit: 1793

lower limit claimed. The argument about the catalyst overlooks the use of organic acid salts, as noted above.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

/Stuart Hendrickson/

Primary Examiner, Art Unit 1793
